One option is to buy a dedicated macro lens (the Canon 100mm is a good example) for a few hundred dollars, and that's all you get: a dedicated piece of glass with only one focal length and limited application.

Unpacked the bags and went and looked some more, and it turns out there were all sorts of these fungi growing around -- they just started popping into my sight the more I looked and walked around.

I had forgotten some of his Photoshop advice on filters, but he just posted a little tutorial on High-Pass Filtering in Photoshop, and it's all coming back to me now.

Highland bulls, maybe Scottish Highland bulls, not quite sure.

Shot with a 70-200mm lens and a full set of Kenko extension tubes -- Was within about an inch for these shots. Don't think I had the maturity or experience back in to understand this (and I certainly don't have it all now, just more of it).

Digital camera and some spare memory cards to hold all the pictures.

It's a fantastic trick.

Really good stuff.
