It's a fantastic trick.

Don't think I had the maturity or experience back in to understand this (and I certainly don't have it all now, just more of it).

These photos were all taken by Jenna.

Shot with a 70-200mm lens and a full set of Kenko extension tubes -- Was within about an inch for these shots. Again, DOF was an issue with these macros, and handholding both the camera and the flash made it all a bit uncertain.

Unpacked the bags and went and looked some more, and it turns out there were all sorts of these fungi growing around -- they just started popping into my sight the more I looked and walked around.

Which brings me to a recheck of my 'rules'.

Really helps with fill light.

One option is to buy a dedicated macro lens (the Canon 100mm is a good example) for a few hundred dollars, and that's all you get: a dedicated piece of glass with only one focal length and limited application.
